Course Introduction: It is essential to understand how organizations actually function, how different parts of the organization interact and work together. This course hence explains the macro aspect of organization behavior, where organization is the unit of analysis. It takes you close to the real world problems and issues that are faced by organizations as a whole rather than by individuals inside organizations. The tools to understand organizations under this discipline are organizational environment, design, structure, strategy, culture and others.

Learning Outcomes (LO): At the end of the course the student should have the understanding of the following:

LO1. How the theories and findings of organizational and behavioral sciences are applied to designing work organizations.

LO2. Examine the reciprocal relationship between the organization characteristics (e.g. Organization Structure, Design, Strategies, Systems, Culture etc.) and managerial behavior.

LO3. The strategies used for bringing about change and technological development in organizations.

LO4. An overall understanding of how the organization develops to maturity.

Course Pedagogy: The pedagogy will be a combination of interactive classroom lectures, case discussions, exercises and activities, some assessments and simulations in class, and class presentation by students. Assignments and mini project will be a part of evaluation along with quizzes and examinations.

Course Readings:

Selected chapters from:

1. Daft, Richard L. (2016). Understanding Theory and Design of Organizations, 12th or latest edition, Cengage.
